This assessment is a mandatory, summative tool designed to:
1. Enable judgement of competency in this procedure and
2. To provide specific, constructive feedback to the trainee about their performance.

There is a judgement to be made in this assessment relating to the overall performance observed: competent or working towards competence. This judgement is specific to this assessment only.

The following anchor statements are guidance about the overall observed level of performance.

For the trainee considered competent in the observed procedure it would generally be expected that: The trainee was able to perform all aspects of the procedure safely and competently with no or minimal need for help, or in the context of an unexpectedly difficult case, may have needed more assistance for the more difficult aspects of the procedure.

For the trainee considered to be working towards competence it would generally be expected that:
The trainee required significant help throughout or with the majority of steps

Confirmation of competence (level 3) of a core procedure will require a minimum of three procedures deemed competent, and with at least two of these by a consultant (or equivalent when non-consultant / non-medical trainers). More than one assessor should also be involved.
